

# STUDENT REPORT

## DETAILS

Name

SHAGUFTHA NIKHAR

Roll Number

3BR23CD087

## EXPERIMENT

Title

TARGET SUM

Description

You are given a list of integers, and your task is to write a function that finds the two numbers in the list that add up to a specific target sum. You need to return the indices of these two numbers.

Write a function that takes a list of Integers and a target sum as input and returns a list of two indices (0-based) of the numbers that add up to the target sum. Assume that there is exactly one solution, and you cannot use the same element twice

Sample Input:

2 7 11 15

9

Sample Output:

[0, 1]

Source Code:

```
def two_sum(nums, target):
    num_map = {}
    for i, num in enumerate(nums):
        complement = target - num
        if complement in num_map:
            return [num_map[complement], i]
        num_map[num] = i

nums = list(map(int, input().split()))
target = int(input())

result = two_sum(nums, target)
print(result)
```

## RESULT

5 / 5 Test Cases Passed | 100 %
