	.You are provided with string str and your task is to shorten the string to the minimum length possible. The minimum length of the string has be attained by performing a set of operations that states that you could select two same characters and delete them but without disturbing the order in the shing which means that only the adjacent same letters can be deleted. For example, "baaab" can be reduced to "bab" in just one iteration.	,13c70°
3R23CD	Your task is to shorten the length of the string str and print the reduced string and if all the characters are deleted then prist "Empty String".	,081 3E
1		
CD081	The Input consists of a single line:	3
	The line contains string str	3BR136
aBRI	The input will be read from the STDIN by the candidate	
5130	Output Format:	130008
	Print the modified string. If the modified string contains character, then print "Empty String".	1300
CO	The output will be matched to the candidate's output printed on the STDOUT	
3K23CD	Sample Input 1:	,081 38
	baaab	,087
287	Output:	
CD	bab	38833
3BR2	Sample Input 2:	5
	baab	303872
	Output:	\$7
	Empty String	<u>a</u>
	Source Code: 3th	388233XX

```
s=input()
l=[]
for i in s:
    if l and l[-1]==i:
        l.pop()
    else:
        l.append(i)
    res="".join(l)
    if res:
        print(res)
    else:
        print("Empty String")

RESULT

5/5 Test Cases Passed | 100 %
